

THE FACTS: ARIZONA

Ending Affordable Care Act tax credits would make health insurance less affordable for **309,000 working Arizonans** and their families, and force **103,000** to go uninsured.

As of 2024, 308,000 people in Arizona receive critical tax credits to lower their monthly premiums. Those tax credits will expire at the end of this year. That means premiums will skyrocket on average \$780 in your state for families, people living with chronic conditions and in rural areas, and small business owners.

For a 60 year old couple earning \$82,800 a year

Annual Premiums would Increase by \$11,977

For a family of four (ages 40, 40, 10, 5) earning \$129,800 a year

Annual Premiums would Increase by \$3,280

35,000 children

children are at risk of losing access to essential health care services.

76%

of small business owners in your state would see premiums skyrocket.

If Health Care Premiums Increase for Families and Workers

- In 2025, more than **24 million Americans** who don't get coverage through their employer, would face significantly higher premiums or lose coverage altogether.
- **1 in 4 people** with chronic conditions could lose coverage.
- People would be **hit hard in rural areas**, where options for health care services are fewer and harder to reach, and the cost of insurance is much higher.
